Re: Request for Bond Release, Black Rock Quarry, BLM Case File UTU-88731; State of Utah, M/027/0088, Millard County, Utah;

To Whom It May Concern:

In October of 2013, the operator seeded the disturbed areas at the Black Rock Quarry with a seed mixture recommended by the BLM. The site was inspected for reclamation progress by BLM staff on August 24, 2014 as well as by the State of Utah Department of Natural Resources. The regulatory agencies conclusion was the site did not at that time meet the vegetation standards required for full release of the remaining bond.

In October 2014, with a crew of five men the site was entirely re-seeded by placing the seed, recommended by the BLM letter of September 10, 2014, under the soil as opposed to spreading the seed on top of the soil. Due to the dearth of winter snow in the 2014/2015 winter season, in an abundance of caution, the site was again seeded in early April 2015.

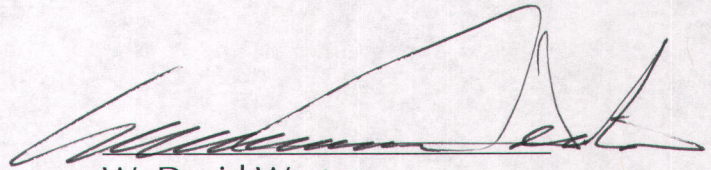

In its letter dated September 9, 2014, the State of Utah reported that it would inspect the site periodically to consider whether any action should be recommended to re-seed the site. No further recommendations for additional

seeding have been received.

It is submitted that the operator has fulfilled every requirement for re-seeding of the surface disturbance area for this desert site. Accordingly, it is respectfully requested that the remaining reclamation bond for this site be released.

Dated this 16th day of August, 2015
